A Development Strategy for Hybrid Products Takeyasu Ichikohji 2021-10-31 This is the first book that deals with technological innovation in Japanese animation industry from a management perspective. In reviewing prior research and explaining the history of the technology, the author raises the difficulty of dealing with new technologies. In particular, the focus is on systems that combine analog technology (drawing by hand) and digital technology (3D computer graphics or 3DCG) to create a product. This combined technology is referred to as "hybrid technology" in this book, and the development and management of "hybrid products" using this technology are studied. The study was conducted in two stages. The first stage was to determine the engineers' (animators') perception of hybrid technology. The results showed that in terms of potential, the hybrid technology of hand-drawn animation combined with 3DCG was rated more highly by engineers than hand-drawn alone. However, in terms of the assessment at that time, hybrid technology was rated higher than 3DCG alone but lower than hand-drawn. Therefore, it was assumed that hybrid technology, while useful, would pose challenges with respect to systematic implementation. The second stage was the development management of hybrid products. The results showed that the "adaptive engineer," who openly accepts other new technologies in the early stages of their emergence contributed to the integration of new and existing technologies.

Strategies for Managing Uncertainty Alfred A. Marcus 2019-03-31 All organizations must cope with future uncertainties. These uncertainties affect the strategic choices they make. They must commit scarce organizational resources to future outcomes which they have little assurance will come into being. Marcus explores how decision makers in the energy industry made choices in the face of such uncertainties, specifically examining two major uncertainties they confronted in the 2012-2018 period - price volatility and climate change. Marcus tells the story of how different companies in the integrated oil and natural gas sector and in the motor vehicle sector responded to these uncertainties. In the face of these challenges, companies in the energy industry hedged their bets by staking out paradoxical or contrasting positions. On the one hand, they focused on capturing as much gain as they could from the world's current dependence on fossil fuels and on the other hand they made preparations for a future in which fossil fuels might not be the world's dominant energy source.
