The College Application Gauntlet Daniel John Klasik 2013 This dissertation proceeds as three separate but related papers. Each works to investigate the importance of the many steps required to enroll in college such as taking the right courses in high school, taking the SAT or ACT, and ultimately completing college applications. The first paper looks descriptively at how students move through the steps to four-year college enrollment. Few studies have examined the steps to college enrollment between college aspiration and college enrollment and how these steps might present a barrier to four-year college enrollment. This study used data from the Education Longitudinal Study: 2002 and employed a multivariate random effects logistic framework to examine the completion of nine steps to enrollment based on student background characteristics and the completion of prior steps. Racial and family income gaps in step completion can be mostly accounted for by differences in academic preparation. Accounting for social and cultural capital reduced, but did not eliminate, remaining gaps. Finally, completion of early steps strongly predicts completion of later steps, though this momentum appeared much stronger for White students than Black or Hispanic ones. The findings suggest college coaching programs should target students early in their high school careers and work to foster college aspirations and provide information about steps to college enrollment. The second paper considers the college enrollment effects of state-required SAT and ACT testing. Since 2001

Colorado, Illinois, and Maine have all enacted policies that require high school juniors to take college entrance exams--the SAT or the ACT. One goal of these policies was to increase college enrollment based on the belief that requiring students to take these exams would make students more likely to consider college as a viable option. Relying on quasi-experimental methods and synthetic control comparison groups, this article presents the effects of this state-mandated college entrance-exam testing. Based on both state- and individual-level analyses I find evidence that entrance exam policies were associated with increases in overall college enrollment in Illinois and that such policies re-sorted students in all three states between different types of institutions. In particular, Colorado saw an increase in enrollment at private four-year institutions, while Illinois and Maine both saw a decrease in enrollment at public two-year institutions. Increases in enrollment at schools that require entrance exams for admissions support the hypothesis that lack of exam scores can present barriers to college entry. The third paper investigates the effect of using the Common Application, a standardized college application form that makes it easier for students to apply to multiple colleges, on students' enrollment decisions. There is little research on how students' college decisions may be influenced by minor facets of the college admission process such as the relative difficulty of completing college applications. I demonstrate that these theoretically minor concerns are, in fact, quite important to the college enrollment process by studying students' use of the Common Application to apply to college. I take advantage of the change in colleges that accept the Common Application between the cohorts of students in the nationally representative NELS and ELS data sets and use an instrumental variables approach to explore the causal effect of the Common Application on students' college enrollment choices and persistence. In theory, the ease of applying to multiple schools through the use of the Common Application has the potential to affect both whether and where students choose to apply to college and, subsequently, the quality of the student-college match. I find evidence that the Common Application does alter students' enrollment choices and has no effect on their likelihood of staying enrolled in college. Thus, despite the enormity of the college decision, small alterations to steps in the college enrollment process can affect high school students' behavior.

National College Entrance Exam in China Yu Zhang 2016-01-29 This book

focuses on the National College Entrance Exam (NCEE), an important

measurement of education quality in China, from both education economics

and education policy perspectives. It provides a better understanding and

stimulates more sophisticated evaluations of NCEE-related policies in China

from the perspectives of education equity, the effectiveness of education input,

and education quality. This book reports inspiring findings based on high-

quality individual level data, innovative measurement design, and various

appropriate identification strategies. The most import conclusion is that both

education equity and quality can be achieved using well-designed policies

based on solid empirical evidence. This is likely the first book published in

English to discuss the NCEE so extensively from multiple perspectives using

concrete evidence.

Gender Gap Under Pressure Xiqian Cai 2016 This paper examines how female and male examination performance are differentially affected by the degree of competitive pressure faced. Our setting is China's National College Entrance Exam (Gaokao) which is widely regarded as the world's most competitive exam. We show that compared to male students, females underperform on the high-stakes Gaokao, relative to their performance on the low-stakes mock examination held two months earlier. The gender gap in exam scores is 0.15 standard deviations larger in the Gaokao relative to the mock exam. This translates to a 15% decline in the probability that females

qualify for a Tier 1 university when moving from a low-stakes setting to a high-stakes setting. To elaborate on the possible mechanisms, we conduct two further analyses. First, for subgroups of students where the stakes matter more, the performance gaps are larger, and we observe a decline in performance among females, coupled with an improvement in performance among males. Second, we find that, compared to males, females perform worse on the afternoon exam in response to negative performance shocks on the morning exam.

Survey of College Entrance Exam Preparation Methods Robin Donaldson 2013 This study surveyed college freshman to determine which types of preparation if any they had before taking either the SAT and/or ACT to decide if a certain type of preparation increased their scores. Students indicated whether they used online resources, self-help resources, school workshops and/or private tutoring before taking either test. The ACT scores were converted to SAT scores so that the data would be uniform. The mean SAT score was computed for those who used preparation and those who did not and comparisons were made. Each individual type of preparation was compared to no preparation. Finally, a correlation was computed between SAT scores and high school grade point averages. The research did not show that students who used preparation performed better than those who did not.

Meritocracy and Its Discontents Zachary M. Howlett 2021-04-15 Meritocracy and Its Discontents investigates the wider social, political, religious, and economic dimensions of the Gaokao, China's national college entrance exam, as well as the complications that arise from its existence. Each year, some nine million high school seniors in China take the Gaokao, which determines college admission and provides a direct but difficult route to an urban lifestyle for China's hundreds of millions of rural residents. But with college graduates struggling to find good jobs, some are questioning the exam's legitimacy—and, by extension, the fairness of Chinese society. Chronicling the experiences of underprivileged youth, Zachary M. Howlett's research illuminates how people remain captivated by the exam because they regard it as fateful—an event both consequential and undetermined. He finds that the exam enables people both to rebel against the social hierarchy and to achieve recognition within it. In Meritocracy and Its Discontents, Howlett contends that the Gaokao serves as a pivotal rite of passage in which people strive to personify cultural virtues such as diligence, composure, filial devotion, and divine favor.

Greek Composition for Schools Robert Johnson Bonner 2017-05-31 Excerpt from Greek Composition for Schools: With Exercises Based on Anabasis I-III, College Entrance Papers, and Original Selections For practice in conversation a few questions in Greek are appended to each of the exercises on Books I and II. The limitations of space made it impossible to add more; but similar questions can easily be framed by teachers who are interested in this sort of work. The Supplementary Exercises, consisting of entrance examination papers of leading American and Canadian universities and selections from literary sources, are liberally annotated. The latter exercises have been selected from a larger number that were thoroughly tested for several years

with classes preparing for admission to college. The notes consist chiefly of recasts of idiomatic phrases into language suitable for literal translation into Greek and of references to the first four books of the Anabasis for words and phrases. In this way the student is obliged to make some effort of his own before he can avail himself of the assistance given. The occasional reading of a few sentences in Greek in the midst of composing can not fail to be helpful and stimulating. These pieces of real English it is hoped will prove a welcome change to both teacher and student. It is recommended that the Supplementary Exercises be not deferred too long. My experience has been that they can be translated with profit by a class whose vocabulary is limited to the first book of the Anabasis. It was found that more real progress was made, for, instead of imitating and copying, the students were obliged to think for themselves. One of the most serious difficulties that the teacher of Greek has to cope with is the paucity of the average student's English-Greek vocabulary. To render the acquisition of a vocabulary comparatively easy, the chief words and phrases of the Anabasis are classified under thirty-nine heads. The association of similar expressions will facilitate the process of memorizing. NO great difficulty will be experienced in committing the bulk of the Word lists to memory, as a large proportion of the words already form part of the student's Greek-English vocabulary, after he has read several books of the Anabasis. However, the Index will render it possible to use the Word lists in connection with the Supplementary Exercises without memorizing them. Administrative Leadership Effect on College Entrance Examination Participation and Performance Cory A. Collins 2015 College entrance exam scores, namely the SAT and ACT, are an important criteria for students applying for admission to their college of choice. Clinedinst, Hurley, and Hawkins (2012) stated that almost ninety percent of colleges and universities ranked college entrance exam scores as considerably or moderately important in the admission process, and more than 1.6 million high school graduates participated in taking the SAT and/or ACT in 2012. With college entrance exams having such a profound impact on college admission and with

the existence of large achievement gaps, it becomes a responsibility of school leaders to work towards improvement of participation and performance on SAT and ACT. This study investigated leadership practices that have positive impact on college entrance exam participation and performance. The study analyzed SAT and ACT data in identified high performing Texas high school campuses, campus groups as identified by Texas AEIS reports, and state averages. Selected Texas public school districts and high schools were contacted to participate in interviews that sought to identify leadership actions associated with their identified strengths in the area of SAT and ACT participation and performance. This study used the archival data from the Texas AEIS report and College Entrance exam reports together with collected interviews of school leaders. The study identified practices that will inform and influence school leaders to improve student participation and performance on SAT and ACT.
