MACBOOK AIR (with M1 Chip) USER GUIDE Jack V Bane 2021-01-05 Apple's new MacBook Air (M1, 2020) is an absolutely fantastic laptop, and thanks to some wonderful new features in the form of the Apple M1 chip (which replaces the Intel processors the company used to use) and an enhanced display, the MacBook Air isn't compromise more for creative who don't want (or can't) pay the higher price for the MacBook Pro. For the past several years, the MacBook Air was a scaled down version of the MacBook that was a great, thin, and light laptop for everyday use. However, this latest version has the same M1 chip that is found in the new 13-inch MacBook Pro (M1, 2020). This means that the MacBook Air can keep up with the more expensive laptop for the first time. So much so that it certainly deserves a spot in our roundup of the best graphic design laptops. 100 Things Every Mac User Should Know (Macworld Superguides) We all like to think we're pretty savvy when it comes to using our Macs. In the case of the typical Macworld reader, that's usually true. (You're all unusually handsome and have wonderful singing voices too.) But there's a funny thing we've noticed when we talk to Mac users, even the supposedly savvy ones: There's often some essential information — basic things that would make their Mac use easier or more efficient — that they've either forgotten or never learned. So we got some Macworld editors and contributors together and asked ourselves: What are the things that every Mac user should know how to do? We didn't meant the really basic stuff -Command-C, Command-V, and so on - but the skills and knowledge that mark you as Mac-literate. And we came up with a list of 100 things that seemed to fit that bill. They range from customizing your Mac's boot-up sequence to shutting down unresponsive apps. In between, they cover Finder navigation, launching apps, keyboard shortcuts, Spotlight, PDFs, user accounts, and much, much more. (Our one rule: None of these things could require third-party tools; we're talking only about stuff you can do with OS X itself.)
