Leases for Lives David R. Bellhouse 2017-07-27 Many historians of insurance have commented on the disconnect between the rise of English life insurance companies in the early eighteenth century and the mathematics behind the sound pricing of life insurance products that was developed at about the same time. Insurance and annuity promoters typically ignored this mathematical work. Bellhouse explores this issue, and shows that the early mathematical work was not motivated by insurance but instead by the fair valuation of life contingent contracts related to property. Even the work of the mathematician James Dodson in the creation of the Equitable Life Assurance Society, offering sound actuarially based premiums, did not change the industry in any significant way. The tipping point was a crisis in 1770 in which the philosopher and mathematician Richard Price, as well as other mathematicians, showed that a dozen or more recently formed annuity societies could not meet their financial obligations and were inviable.

Popular Mechanics 1938-03 Popular Mechanics inspires, instructs and influences readers to help them master the modern world. Multi-Modal Competition and the Future of Mail Michael A. Crew 2012 This compilation of original papers selected from the 19th Conference on Postal and Delivery Economics and authored by an international cast of economists, lawyers, regulators and industry practitioners addresses perhaps the major problem that has ever faced the postal sector – electronic competition from information and communication technologies (ICT). This has increased significantly over the last few years with a consequent serious drop in mail volume. All postal services have been hard hit by ICT, but probably the hardest hit is the United States Postal Service, which has lost almost a quarter of its mail volume since 2007. The loss of mail volume has a devastating effect on scale economies, which now work against post offices, forcing up their unit costs. Strategies to stem the loss in volume include non-linear pricing or volume discounts, increased efficiency and the development of new products. This loss of mail volume from ICT is one of a number of current problems addressed in this volume. The Universal Service Obligation (USO) continues to be a leading issue and concern that ICT undermines postal services' ability to finance the USO is discussed. The importance of measuring and forecasting demand and costs take on even greater importance as ICT undermines the foundations of the postal business. This thought provoking book brings to bear new analyses of the most serious threat post offices have ever faced and raises fundamental questions as to the future of mail. Multi-Modal Competition and the Future of Mail is an ideal resource for students, researchers in regulation and competition law, postal administrations, policy makers, consulting firms and regulatory bodies.

Romanticism and Theatrical Experience Jonathan Mulrooney 2019-01-10 Bringing together studies in theater history, print culture, and literature, this book offers a new consideration of Romantic-period writing in Britain. Recovering a wide range of theatrical criticism from newspapers and periodicals, some of it overlooked since its original publication in Regency London, Jonathan Mulrooney explores new contexts for the work of the actor Edmund Kean, essayist William Hazlitt, and poet John Keats. Kean's ongoing presence as a figure in the theatrical news presented readers with a provocative re-imagining of personal subjectivity and a reworking of the British theatrical tradition. Hazlitt and Keats, in turn, imagined the essayist and the poet along similar theatrical lines, reframing Romantic prose and poetics. Taken together, these case studies illustrate not only theater's significance to early nineteenth-century Londoners, but also the importance of theater's textual legacies for our own re-assessment of 'Romanticism' as a historical and cultural phenomenon.
