Prehistoric, Ancient Near Eastern & Aegean Textiles and Dress Marie-Louise Nosch
2014-09-30 Textile and dress production, from raw materials to finished items, has had a significant impact on society from its earliest history. The essays in this volume offer a fresh insight into the emerging interdisciplinary research field of textile and dress studies by discussing archaeological, iconographical and textual evidence within a broad geographical and chronological spectrum. The thirteen chapters explore issues, such as the analysis of textile tools, especially spindle whorls, and textile imprints for reconstructing textile production in contexts as different as Neolithic Transylvania, the Early Bronze Age North Aegean and the Early Iron Age Eastern Mediterranean; the

importance of cuneiform clay tablets as a documentary source for both drawing a detailed picture of the administration of a textile industry and for addressing gender issues, such as the construction of masculinity in the Sumerian kingdoms of the 3rd millennium BC; and discussions of royal and priestly costumes and clothing ornaments in the Mesopotamian kingdom of Mari and in Mycenaean culture. Textile terms testify to intensive exchanges between Semitic and Indo-European languages, especially within the terminology of trade goods. The production and consumption of textiles and garments are demonstrated in 2nd millennium Hittite Anatolia; from 1st millennium BC Assyria, a cross-disciplinary approach combines texts, realia and iconography to produce a systematic study of golden dress decorations; and finally, the important discussion of fibres, flax and wool, in written and archaeological sources is evidence for delineating the economy of linen and the strong symbolic value of fibre types in 1st millennium Babylonia and the Southern Levant. The volume is part of a pair together with *Greek and Roman Textiles and Dress: An Interdisciplinary Anthology* edited by Mary Harlow and Marie-Louise Nosch.

Reliable Post Disaster Services over Smartphone Based DTN Souvik Basu 2019-03-28

This book proposes a framework and strategies for reliable end-to-end post-disaster services using smartphone-based delay-tolerant networks, which can operate even in the absence of conventional network connectivity. It explores various aspects of this challenge, ranging from accurate need assessment, to timely need accumulation, efficient resource allocation, and reliable data dissemination. The book offers insightful reading for all technologists and researchers working in the domain of ICT-based disaster management in developing countries, and will help them grasp the challenges involved in providing post-disaster services in an extremely difficult network scenario, while also offering possible solutions. The book will also benefit disaster management

authorities, government agencies, NGOs and other stakeholders, helping them enhance their preparedness through the intelligent use of wireless technologies coupled with smart devices.

Post-disaster Navigation and Allied Services over Opportunistic Networks Suman Bhattacharjee 2021-04-15 This book provides the details of developing a digital pedestrian map construction system over the intermittently connected mobile network. Over the past couple of decades, countries across the world, both developing and developed, have witnessed a significant number of disasters. Thus, it has become mandatory for each of the disaster-prone countries to equip themselves with appropriate measures to cope with the challenges of providing post-disaster services. Some of the serious challenges are incapacitated communication infrastructure, unstable power supply and inaccessible road networks. Out of these challenges, the destruction of road networks, especially in developing countries, acts as a major hindrance to effective disaster management. To be more specific, the success of a disaster response operation generally depends on the speed of evacuation and transportation of adequate amount of relief materials at the right time to the disaster-

affected areas. Hence, map-based navigation support is a primary requirement for post-disaster relief operations. This book also provides the solution of the two other important post-disaster management services such as situational awareness and resource allocation. Both of these services are invariably dependent on the existence of navigation support. Finally, in order to offer such services, the other challenge is to address the problem of incapacitated communication infrastructure. This book also deals with such challenges in post-disaster scenarios and develops automated post-disaster management services.
