When Technology Fails Matthew Stein 2008-08-18

There's never been a better time to "be prepared."

Matthew Stein's comprehensive primer on sustainable living skills—from food and water to shelter and energy to first-aid and crisis-management skills—prepares you to

embark on the path toward sustainability. But unlike any other book, Stein not only shows you how to live “green” in seemingly stable times, but to live in the face of potential disasters, lasting days or years, coming in the form of social upheaval, economic meltdown, or environmental catastrophe. When Technology Fails covers the gamut. You’ll learn how to start a fire and keep warm if you’ve been left temporarily homeless, as well as the basics of installing a renewable energy system for your home or business. You’ll learn how to find and sterilize water in the face of utility failure, as well as practical information for dealing with water-quality issues even when the public tap water is still flowing. You’ll learn alternative techniques for healing equally suited to an era of profit-driven malpractice as to situations of social calamity. Each chapter (a survey of the risks to the status quo; supplies and preparation for short- and long-term emergencies; emergency measures for survival; water; food; shelter; clothing; first aid, low-tech medicine, and healing; energy, heat, and power; metalworking; utensils and storage; low-tech chemistry; and engineering, machines, and materials) offers the same approach, describing skills for self-reliance in good times and bad. Fully revised and expanded—the first edition was written pre-9/11 and pre-Katrina, when few Americans took the risk of social disruption seriously—When Technology Fails ends on a positive, proactive note with a new chapter on "Making the Shift to Sustainability," which offers practical suggestions for changing our world on personal, community and global levels.

Seaforth World Naval Review 2016 Conrad Waters 2015-

11-03 “The crème de la crème of naval writers . . . an extremely detailed overview of the last year in naval policy, construction and deployment.”—Warship World

This annual has an established reputation as an authoritative but affordable summary of all that has happened in the naval world in the previous twelve months. It combines regional surveys with one-off major articles on noteworthy new ships and other important developments. Besides the latest warship projects, it also looks at wider issues of importance to navies, such as aviation and electronics, and calls on expertise from around the globe to give a balanced picture of what is going on and to interpret its significance. This edition looks in detail at the Royal Navy as it faces the latest defense review, and evaluates the Indonesian Navy, while significant ships will include the USN’s San Antonio class amphibious transports, the new Dutch OPVs, the Turkish Milgem class corvettes and the Greek Roussen class fast attack craft. There are also technological reviews dealing with naval aviation by David Hobbs, focusing on maritime patrol aircraft, while Norman Friedman surveys recent electronic warfare developments. Intended to make interesting reading as well as providing authoritative reference, there is a strong visual emphasis, including specially commissioned drawings and the most up-to-date photographs and artists’ impressions. For anyone with an

interest in contemporary naval affairs, whether an enthusiast or a defense professional, this annual has become required reading. "A high-quality, deeply-researched and handsomely-illustrated book."—Army Rumour Service
